SLIDE-OUT AND ROTATING RACKS

Our 19" Floating Slide-Out and Rotating Rack series offers two versatile options for managing your AV and IT equipment—an open-frame rack and a closed rack cabinet. Both models share exceptional features, delivering flexibility, easy access, and robust support for any professional installation.

The MPR is the open-frame version, and offers unrestricted airflow and easy access from all sides. Ideal for environments where cooling is paramount or space constraints require quick hands-on access.

The SPR is the closed version, and for environments that require added protection, the closed rack cabinet provides a secure, enclosed solution. This option protects equipment from dust and tampering while still offering the slide-out and rotating functionality both in floating or roll-out configuration.
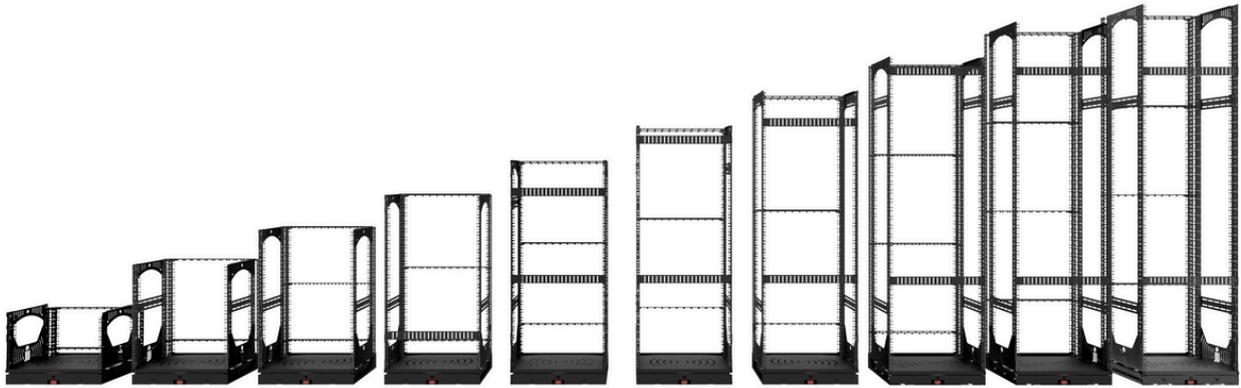

These racks enable easy integration of 19" equipment thanks to their floating slide-out and rotative capability and their design facilitates mounting within furnitures or for on-wall installation, ensuring easy access to the rear side of the equipment for maintenance and servicing. In fact, the slide-out equipment base can rotate up to 90° in both directions, and a lateral and rear cable support system ensures efficient cable management.

They are offered in a range of heights, from 6 to 42 rack units with different available depth, extraction capability and load capacity from 120 kg to 250 kg.

MPR SERIES

PULL-OUT AND ROTATING 19" RACKS

The MPR series racks make each installation of 19" equipment simple throughout a an open frame rack with floating slide-out and rotating system. In fact, their design allows easy mounting in walls or furniture, providing convenient access to the back of the equipment for maintenance. Moreover, the pull-out base can rotate up to 90° in both directions, while lateral and rear cable support systems to ensure effective cable management. These racks come in various heights ranging from 6 to 42 rack units, with different depths, extraction capabilities, and load capacities from 120 kg to 250 kg. Each rack includes safety locking systems for both extraction and rotation to ensure operational safety. Additionally, a top panel can be optionally added for installing ventilation fans.
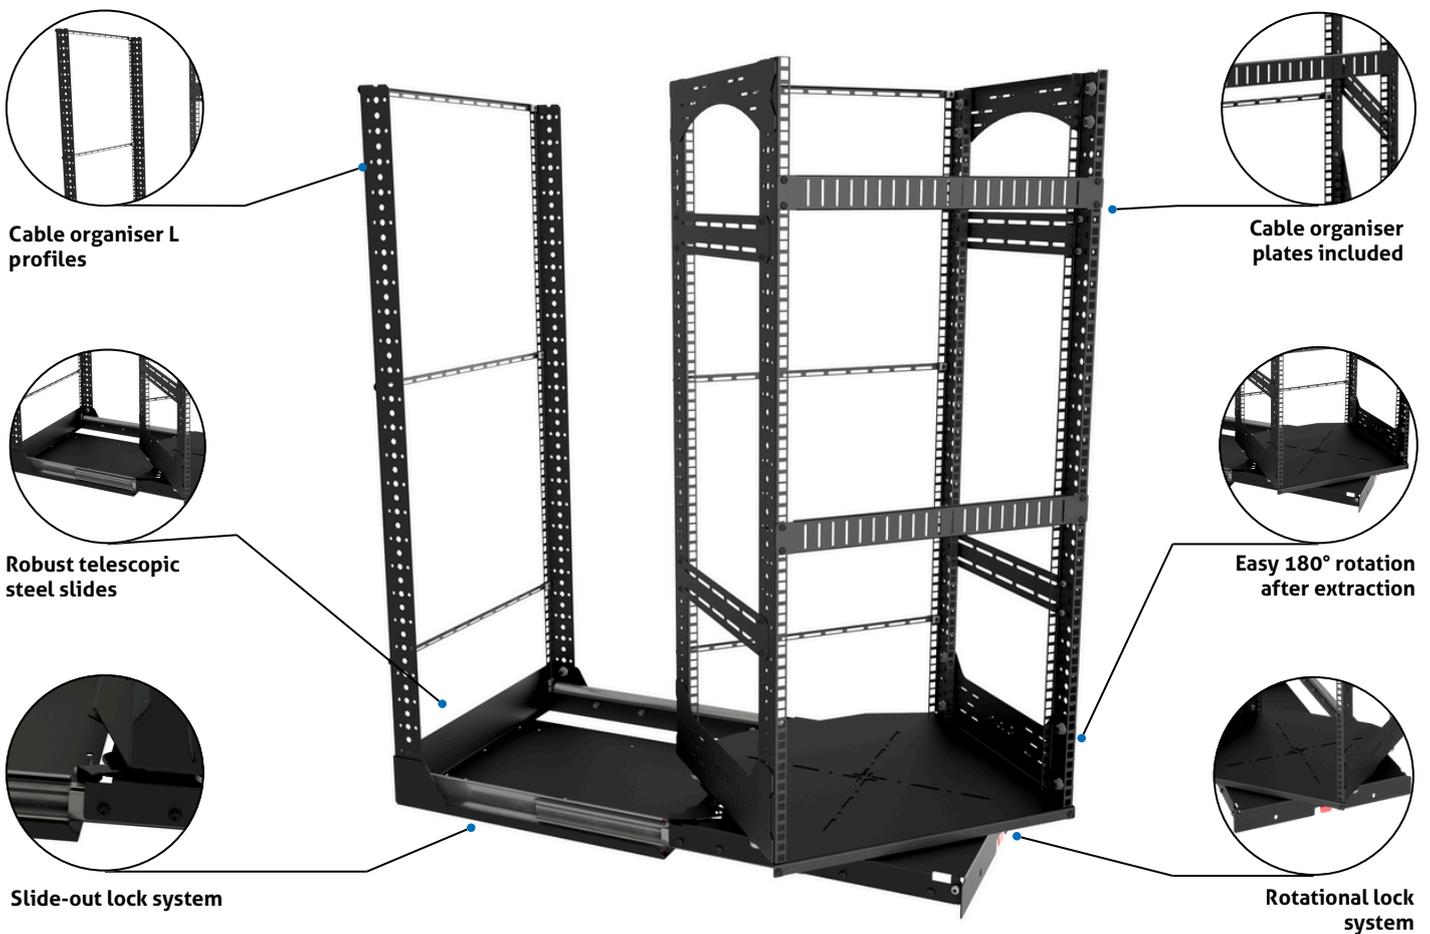

19'' Pull-Out and Rotating System

The MPR LC130 is our floating slide-out and rotating open frame 19-inch rack. It has a storage capacity for AV and ITC systems up to 42 rack units and 120 kg of load capacity. It also features two security lock systems that prevent the rack from accidentally sliding back or rotating during use.

Move the rack's base out and lock it in place, then flip it around 180° for easy access during installation or maintenance. Keep your systems organized with included wire management plates and L rail profiles, and cooled with the optional rack top where fans can be installed through standard mounting points.
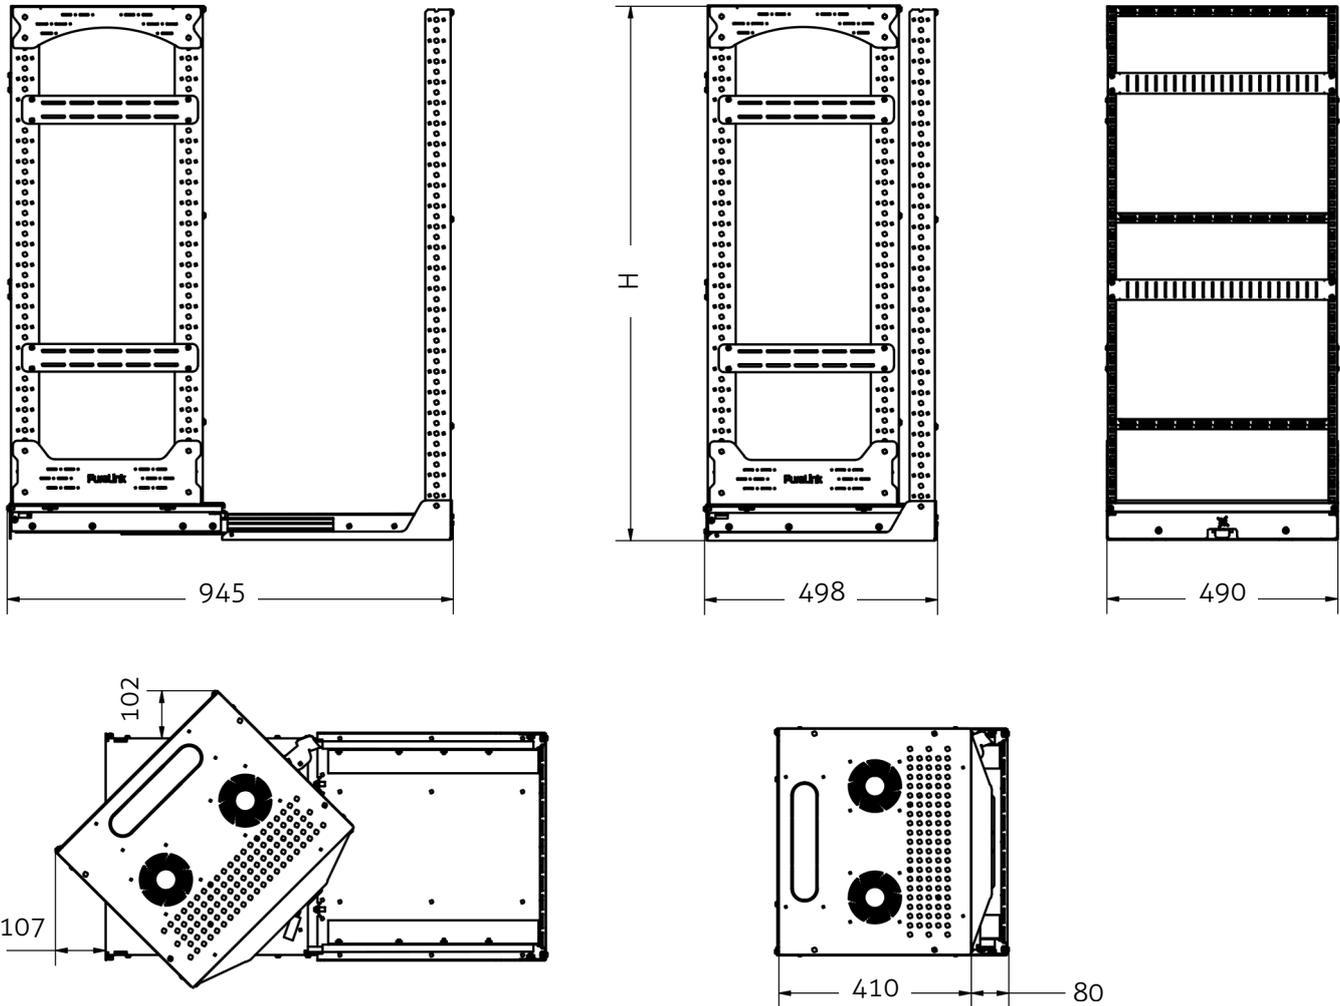

The rack and accessories are finished in a black fine structure (RAL9005) powder coating with the front pedal lock in red (RAL 3020). Other colours and finishes are available on request.

Cable organiser L profiles

Robust telescopic steel slides

Slide-out lock system

Cable organiser plates included

Easy 180° rotation after extraction

Rotational lock system

Main Features

- 19'' floating slide-out and rotating rack
- Capacity up to 42 rack units
- Robust 2 mm steel sheet base
- Load capacity up to 120 kg
- Rotation lock system
- Locks in the extended position for simplified equipment integration

- Pre-assembled sliding base
- Flat pack delivery
- Top panel with ventilation design available on request
- Plates for cable organisation included
- Other colours or finishes available on request
- Rack rails available with threaded holes
