

PLS SERIES

19" PULL-OUT RACKS ON TELESCOPIC SLIDES

If you're looking for a 19" rack that is easy to install even in the tightest spaces while still providing convenient access to equipment positioned deep inside, you're in the right place.

Say goodbye to awkward movements and enjoy effortless access with Purelink's pull-out system, the PLS.

This is not a standard rack shelf. The PLS features a triple-extension pull-out base supported by robust telescopic slides with a 180 kg load capacity, capable of handling even the most demanding equipment.

Precisely engineered, the system ensures excellent stability thanks to its solid structure made from 2 mm-thick steel. Flat-pack shipping helps reduce transportation costs.
