

SWG SERIES

19" RACK CABINET WITH SWING DOOR

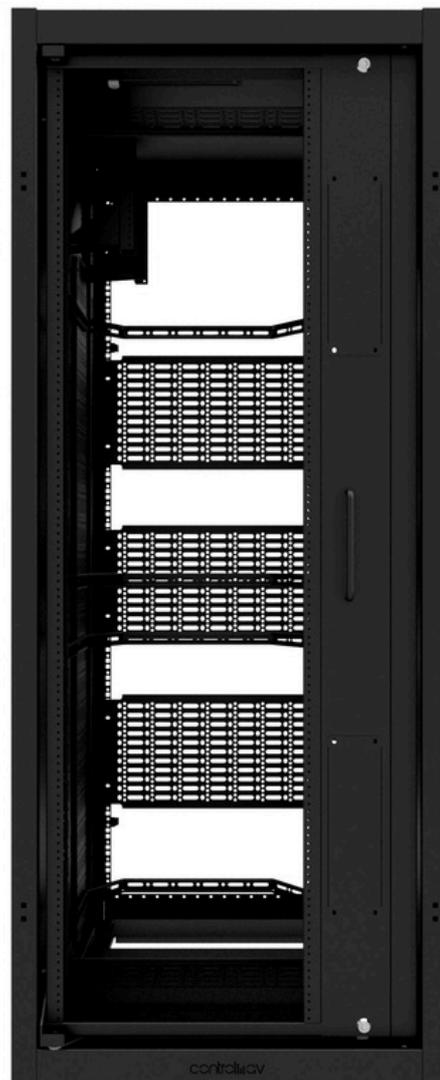

If you are looking for a 19" rack that is robust, stable, and offers enhanced accessibility, the SWG series is the ideal solution.

Its key feature is the internal 19" swing frame door, mounted on solid steel pins system that enables smooth, controlled opening and provides full access to the components installed on the front frame.

Thanks to this swing-frame configuration, cabling, patching, and active device operations can be carried out quickly, without removing the side or front panels.

The welded steel structure and the two heavy-duty pins ensure easy handling without compromising stability.

To complete its performance, included vertical cable management plates in the rear part of the swing door and in the rack's rear area simplify the integration and cabling process.

Technical specifications

- High-strength welded steel structure
- Reversible swing door installation and opening direction
- Rack rails with threaded M6 holes
- Removable side panels and rear panel
- Load capacity up to 200 kg.
- Epoxy powder coating black RAL9005 fine structure
- Cable management plates for the swing door included
- Removable square front plates on the door
- 19" uprights, EIA-310 standard, with square holes for cage nuts available on request
- Option to add feet and leveling systems.
- Compatibility with ventilation systems, cable management solutions, and accessories on request.
- Customization of the top panel available.
- Bottom plates available on request
