

## PLS SERIES

### 19" TRIPLE EXTRACTION PULL-OUT RACK FRAMES

If you are looking for a 19" rack easy to be installed even in the tightest spaces and in the same time providing effortless access to reach all that equipment buried in deep, you are in the right place.

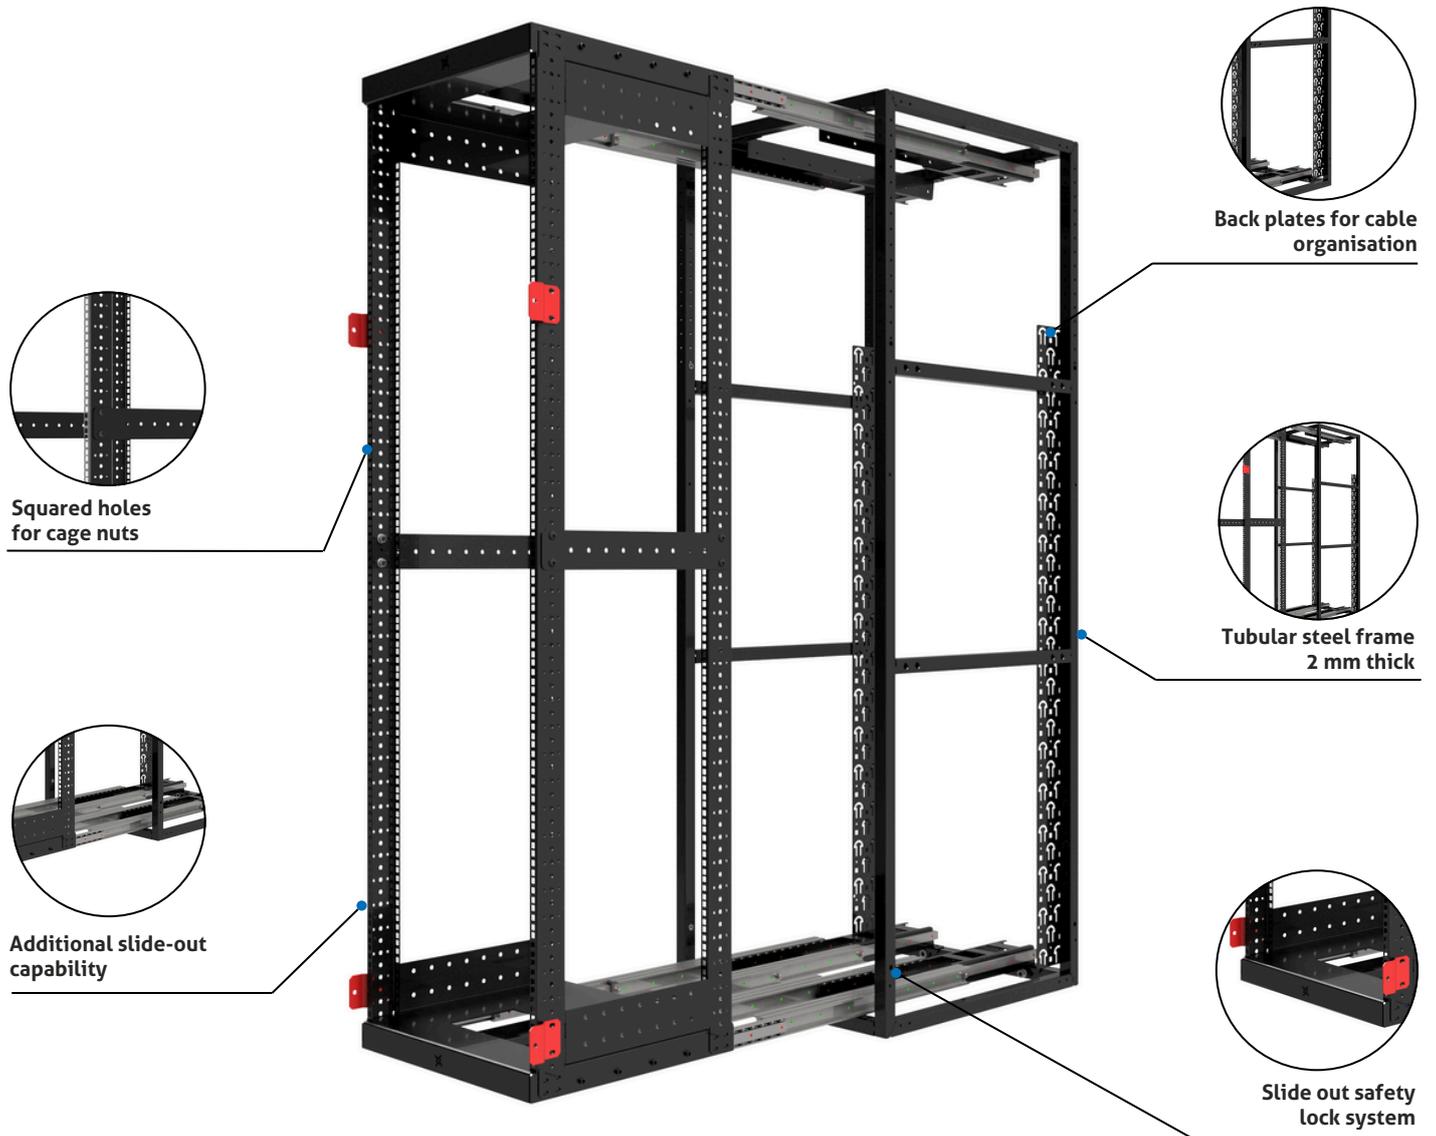

Say goodbye to contortions and hello to effortless access with the all-new Purelink slide-out system, the PLS.

This isn't your average rack shelf. The PLS boasts a triple extraction slide-out base, supported by heavy duty sliders with solutions from 320 to 450 kg load capacity, handling even the most demanding equipment. It can be selected in any size from 18 RU to 42 RU and in three available depths: 600, 750, 950 mm.

As a customized solution we offer the possibility to divide the rack structure into a slide-out part and fixed part positioned in the bottom or the top of the rack removable from the rest of the structure for an easier equipment handling.

## 19" Triple Extraction Pull-Out Rack Frame
